

## About IXON

IXON was founded in 2014 to address an increasing demand from machine builders to be able to connect machines to the cloud. IXON offers machine builders a secure, reliable way to stay connected to their machines & customers. Get started with your own IoT platform, without the need for long software development projects and new software skills. What you get is an accessible solution that allows you to start small and that grows with your business.

Over 50.000 machines worldwide from more than 2.500 machine builders are already connected with IXON. IXON aims to help them to succeed in their transition from the 'build, sell and forget model' to becoming a service provider with the right technology and support.
